# Bank Simulator app with GUI in Java

When start the application, the first menu is this:

There are 2 buttons, for Employees or for Companies, we click the second button and the menu is:

The company menu has 3 buttons:

- **First button is for adding a company in Bank Simulator, this is the most important button, because if are not registred companies in app, <u>we cannot add employees</u>.**

- **Second button is for printing the Companies that are in Bank Simulator.**
- **Third button is for changing budget of a company.**

When we click first button in first menu,the next frame is:

The employee menu has 5 buttons:

- **The first one is for adding an employee:**

Here are some exceptions, like if the IBAN is already used, or if the Company doesnt exist.

- **The second button is for paying a salary of a employee:**

Here, the exceptions are, if the iban doesnt exist, or if the company where the employee is doesnt have the budget for paying the salary.

- **The third button is printing all employees that are in Bank Simulator.**
- **The fourth button is printing a financial statement for an employee.**

Message   ✕

ⓘ + Bank Balance at start of: 0
+ Salary from Quantic with the value of: 1000
Total: 1000 lei

OK

- **The last button is for withdrawal of money from Bank Simulator of a employee.**
